

X3MA 15

Following up the great success of the Sanremo 15 line, the best and the most popular wheel on the market, the Evo Corse team, thanks to the experience acquired during these years with the competitions and using the best technologies, has now reached another important goal of great technological value.

The new wheel is the **X3MA 15 (EXTREMA 15)**, obtained from a special low pressure casting, in primary alloy aluminium with heat treatment, that provides resistance and lightness absolutely out of the ordinary.

Better handling, better acceleration and cooling during braking, thanks to its design and especially to its incredible weight: **6,5 Kg; about 2 kg per wheel less** than the other best wheels available in the market.

The X3MA wheel is ready for Renault Clio (Phase 1 and Light) and Peugeot: in the near future more applications will be available.
